Good evening Steve,

Attached are the maps showing the sections of the North Little Muddy that can be covered by foot.

We were able to cover the section north of the 54th st bridge yesterday afternoon after our meeting with Jeff. There was no oil observed.

Our plan is to cover the section south of the bridge all the way to 42nd st Tomorrow; in order to complete all areas of the North Little Muddy before boat operations begin on Tuesday.

We trialed tested a remediation technique by using a shop vac to recover emulsified oil in sections of boom that were not accessible by vac truck on Ron Njos's property. I have attached pictures to show that this was successful.

Eduardo is flying out Monday morning 30March15 and is going to brief the command on ongoing Coast Guard presence at the sight up 21APR15. Right now our plan was to have my relief here by Friday 03April15 in order for me to have a proper pass down before I depart on 05April15.

Respectfully,

PO2 Brian LaMoria
